THE EVOLUTION OF A NEW CONCEPT

The architectural design of art galleries, has evolved from a Beaux-arts style to modern minimalist interiors- a backdrop of stark walls craving frames and canvases, which are highly responsive to any natural light.

Whether the gallery concept is 'urban' or 'heritage' the collaboration of intelligent lighting design together with the calculated manipulation of natural light can create a new physiological dimension and affect the visual perception of an artwork and offer the artist and gallery curator the opportunity to reveal the various layers of the piece, and deliver a full and comprehensive artistic experience of the space exhibits and artworks.

As the exhibits and artworks change so must the respective lighting design of the gallery space. Advanced lighting technology and precision optics, have created numerous opportunities to achieve the desired unique lighting effects.

BEAM ANGLES

A narrow beam angle can be used to accentuate the features of an artwork or sculpture, or highlight a certain pattern on a canvas.

When the proximity of the light to an artefact cannot be re-negotiated, the focus must be on reducing glare and what are often referred to as 'hot spots' of light.

A wider beam angle can solve this issue.

DIMMING

The combination of precise beam angles and light intensity can affect lighting scenarios that dramatise exhibits and create a perception of an artwork or sculpture to be radiating light.

Dimming light is associated with creating a sense of increased intimacy, so the desire for light to become "warmer" as it dims can also be achieved.

As light is dimmed, pupils will dilate and let in more light.

Studies support that an increased pupil results in heightened visual exploration.

Dimming the brightness of the light is a useful tool when exhibiting larger, complex pieces to draw the observer's attention to applied techniques, while increasing the light intensity can compliment brightly coloured artworks.

Body

Projector with cast aluminum light head (integrated driver)
Tilttable vertically 0 - 90°, rotatable horizontally 350°.

The zoomable lense allow to adjust the beam angle
15° - 45°
15° - 60°.

Ideal to be installed in areas that require flexibility
in showcasing objects such as museum, hospitality and
retail.

Body

Track mounted spot light with light head in diecast aluminum and front cover in thermoplastic.

Available in 3 different sizes and wattages.

Rotatable horizontally 350° and tiltable vertically 90°. “Solo” is really versatile, suitable for many applications for either commercial and residential projects.

LUNA 28				28				28W	2198 2320	12° 24° 36°		

Body

Track mounted spotlight with die cast aluminum body inclusive of integrated faceted no dazzle louvre in thermoplastic.

Available in 1 or 3 circuits.

Angle tiltable vertically 0 - 90° rotatable horizontally 350°.

Classic still outstanding design, with an almost total antiglare effect.

Ideal for art galleries, residential, hotel and commercial areas.

THE QUALITY OF LIGHT

Lighting is an essential tool of narration. Art galleries can use lighting to guide the visitor's emotional experience and use a creative play of light and shadow to dramatize a piece, or change the mood of the exhibition and its environment e.g from modern to romantic, and even draw the visitor's eye to a specific detail in a unique artwork or sculpture.

Merely pin-spotting artworks will not build perception or dimension.

The harmonizing of various features of the light, specifically - the light's colour temperature, intensity and beam spread are the small details that will elevate an exhibit.

Since visitors are free to move around the space, in any direction, the light can also be used to re-direct them without interfering with the display.

Part of adjusting the evocative journey of an exhibit requires us to pay attention to the visual comfort of the lighting.

COLOUR TEMPERATURE

Most art galleries will have natural daylight flowing into the space, so it is inevitable that there will be a mix of natural daylight and artificial lighting in the art gallery.

As the natural light will change during the course of the day and season, it is important that their rays should blend well.

Since the colour rendering in natural daylight is unique and visually preferable, it makes sense to integrate the colour temperature of the artificial light in order to avoid any emotional disconnect from the piece when the collector installs the artwork into its new environment.

To coordinate the colour temperature of the light, by changing the colour temperature, different colours and effects from the same artwork can be observed.

SENSITIVE ENVIRONMENT. PROLONGED EXPOSURE

In general any light-sensitive items should be displayed using discreet, deep-recessed downlights in order to protect the items from UV exposure.

The use of low output spotlights with localised dimming can provide good lighting and still limit the maximum output to 50 LUX, to preserve any conservation items and avoid fading or damage from over exposure.

ACCENT & WASH

Lighting the vertical surfaces of the interior can emphasise the spatial perception of the room, while offering some general lighting. The smooth wall surfaces in art galleries respond well to wall washing and wall grazing.

Wall washing is an ideal solution for effectively lighting an extra large artwork compared to accent lighting with a narrower beam, which is used to draw attention to a particular area and guide the observer's eye to that point.

THE IMPORTANCE OF AMBIENCE

The most common lighting system to facilitate the art gallery's operation, is linear, continuous runs of track, that will usually run the length of the space, and support spotlights to highlight the artworks.

The lighting should all be subject to a control system, to enable preset scenes that reflect the availability of natural light - saving energy where possible, while still preserving the desired atmosphere.

Body

Track mounted wallwasher, with rectangular light head and driver box in cast aluminum.

This powerfull track light tiltable vertically 90° and rotatable

horizontally 350° is ideal for hospitality projects as well as for lobbies and conferences spaces.

Available with CRI 95.

SONO is perfect for art galleries and museums.
